Notes & definitions

- **MIS Score** = (2 × Free Recall words) + Cued Recall words. Max score is 8 (all 4 words recalled freely).
- **Good** = score 5–8 · **Poor** = score 0–4.

- **Word Set** — respondents are shown one of 10 English word sets (or 8 Spanish sets) in randomized presentation order. All four words come from different semantic categories to minimize association effects.
- **Self vs Someone Else** — MIS is a self-administered screen. "Someone Else" respondents are caregivers or family members evaluating a loved one.
- **Avg Score by Concern Flag** — respondents who expressed memory concern or have a diagnosis tend to score lower, which is the expected clinical pattern.
