

Result Sharing

Every click of the **"Share PDF via Email"** button on a persona/result page. **No email address is ever shown here** — only whether a share happened, which result page it was for, when, and whether the person opted in to be contacted again.

Opted In to Be Contacted
225

Opt-In Rate
7.2%

Opted In to Be Contacted reflects the "keep in touch" checkbox shown at share time — an explicit, person-level consent signal. This is the only contactability data available in this report; the email address itself is never modeled or displayed here. To actually reach someone, an authorized query against the raw source (``usa2-brainguide.MyBrainguide.raw_share-pdf-via-email``, filtered to the same date range / result page) is required, run outside this dashboard.

Apr 2026	632	0
May 2026	424	0
Jun 2026	353	0
Jul 2026	339	39
Aug 2026	4	3

Notes & definitions

- PDF Share** — one row per click of the "Share PDF via Email" / "Email Results" button on a persona/result page. Source: `usa2-brainguide.MyBrainguide.raw_share-pdf-via-email` (+ `-go365` and `-prevention` variants), modeled via `stg_share_pdf` → `mart_pdf_shares` (dbt). Covers June 2022 – present — the longest history of any dataset in this project.
- No email addresses are stored or displayed anywhere in this dashboard.** `stg_share_pdf` only selects `tailored_page`, `created_at`, `language`, and `keep_with_touch` from the raw record — the `email` and `contact_id` fields are never extracted.
- Opted In to Be Contacted** — the respondent checked "keep in touch" at the moment they shared their PDF. This is a real, person-level consent signal, distinct

from just sharing.

- **Result Page** — `tailored_page` is the actual persona/result page URL captured at share time. Prevention flow pages (`prevention-next-steps-N`) aren't in the persona name mapping used elsewhere in this dashboard, so they show a "Not provided" persona label but the page URL itself is always shown.
- **Prevention** — a third questionnaire variant (alongside BrainGuide Standard and Go365) discovered via this table; the Prevention questionnaire's own completion data isn't otherwise modeled in this project yet.
- **To actually contact these people** — run an authorized query directly against the raw source table, filtered to the same date range / result page as this report, to retrieve `email.S`. This is a deliberate step outside the dashboard, not a feature of it.
- **Related but distinct metric** — separately, `mart_questionnaire_responses.shared_results_email` flags respondents who supplied an email *during the questionnaire itself* (mostly on the SBC flow, at completion) — a different moment and mostly a different population than the "Share PDF" button on the result page. See [Results Overview](#) if useful, but it is not part of this report.
