Monthly Clicks by Destination

Notes & definitions

- **Visits** = GA4 pageviews on `/clinical-trials/` (English) or `/ensayos-clinicos/` (Spanish), sourced from `mart_top_content`. History goes back to June 2025.
- **Outbound clicks** are GA4 `outbound_click` events fired from either page, sourced from `mart_ga4_outbound_clicks`. Tracking (the `link_url`/`link_text`/`link_domain` custom dimensions) began May 2026, so click counts before that date will be incomplete or zero.
- **Click-Through Rate** = total outbound clicks ÷ total visits for the selected date range. Not a strict per-visitor rate — a single visit can generate multiple clicks.
- **Destination** is the `link_text` GA4 custom dimension (e.g. `find_a_clinical_trial`) — the identifier set on each outbound link, not the visible link copy.
- Sources: `usa2-brainguide.reporting.mart_top_content` and `usa2-brainguide.reporting.mart_ga4_outbound_clicks` (dbt), refreshed daily.
