Data coverage — BrainGuide Standard: Jan 2024 – present (current; monthly actuals from tracking spreadsheet available back to March 2021 in the All-Time Trend). **Go365:** Feb 2025 – present (current).

> filtered

> 72,419 records with 40 properties

Summary

Started

93,203

Received Score

72,419

Got Information w/o Score

0

Score Completion Rate

77.7%

Started and **Got Information w/o Score** respond to **Questionnaire, Date Range / Year, Flow Type, Language, UTM Campaign, and UTM Source** — all captured at session start. Demographic filters (Brain Health, Persona, Score, Gender, Age, Education, Race, MIS Word List, Memory Concern fields) only apply from **Received Score** down, since those fields are only collected once a respondent reaches a scored flow. **Legacy Web - 2021-23** is always included in full when selected — it predates individual-level tracking.

All-Time Monthly Activity

Data note: Before January 2024, figures come from the monthly summary columns of the legacy tracking spreadsheet — these are the authoritative actuals, not estimates. "Started" = Total Chats (Web + Voice). "Completed" = Total Completed

Questionnaires. From January 2024, counts are exact figures from the DynamoDB database.

Monthly Started & Completed — All Time

Month	Questionnaire	Source	Started	Completed	Received Score	Got Info
Jan 2026	BrainGuideStandard	dynamodb	14,389	12,431	7,162	5,269

Aug 2026	314	71.1%	28.9%	68.1%

Notes & definitions

- Started** — any respondent with a record in the DynamoDB table (any action state). Start date is the earliest `updatedAt` for that respondent. This is the "loaded the questionnaire" count. Each respondent has exactly one row in the raw export (the record is updated in place as they progress, not appended), and locale/UTM are written once at session creation — present on ~100% / ~25% of records respectively regardless of completion state. So **Started** and **Got Information w/o Score** respond to Questionnaire, Date Range/Year, Flow Type, Language, and UTM

filters. Demographics (gender, age, education, race, brain health, persona, score) are only collected once a respondent reaches a scored flow, so those filters apply from **Received Score** down only.

- **UTM Campaign "(none)"** — sorted to the top of the filter list since it's typically the largest single value (direct/organic traffic).
- **Received Score** — completed a scored flow (ad8, mis, or sbc) by reaching `GET_SCORE` or `GET_SBC`. Excludes flow `c`.
- **Got Information w/o Score** — completed the `c` flow ("Get Information" path); user received content but no scored assessment result.
- **Score Completion Rate** — $\text{Received Score} \div \text{Started}$. The gap represents respondents who started but did not finish.
- **Sanity check** — $\text{Received Score} + \text{Got Information} \approx$ the former "Questionnaire Responses" total. The small difference (if any) reflects timing: the date filter applies to `started_date` for funnel counts and `completed_date` for outcome/demographic analysis.
- **Brain Health Outcome** — derived from result URL using the persona mapping on the [Scoring Reference](#) page. Good/Poor/Moderate reflect where the respondent was routed, not a clinical diagnosis. ~95% of SBC respondents have "Not provided" because most SBC sessions do not return a scored result URL.
- **Score Category** — flow-type aware: AD8/C use 0–8 scale (lower = less concern); MIS uses 0–8 scale (higher = better memory); SBC uses the result URL risk level (Low/Medium/High Risk).
- **SBC Score** — Speech Based Cognition, a continuous 0–1 value. Higher = lower risk. Most SBC respondents do not receive a score; those who do tend to score low (high risk). See [Scoring Reference](#).
- **Not provided** — respondent did not supply that demographic, selected "Prefer not to answer" (stored identically to skipped), or did not receive a scored result. The `c` and `a` flows never collect demographics; the `sbc` flow rarely returns a result URL.
- **Gender** — questionnaire options: Female / Male / Non-binary, Gender Fluid, or Other / Prefer not to answer. Stored as `female`, `male`, `other`, `prefer_not_to_answer`.
- **Age** — questionnaire shows age buckets (Under 45, 45-54, 55-64, 65-74, 75 and Older); birth year is stored internally and age bucket is derived at query time. "Prefer not to answer" stores null → appears as 'Not provided'.
- **Education** — questionnaire options map to years of schooling stored in DynamoDB: Less than High School (`<12 yrs`), High School/Equivalent (12),

College/Trade School (13–15), Post-Graduate (16+). "Prefer not to answer" stores null → appears as 'Not provided' (indistinguishable from skipped).

- **Race/Ethnicity** — questionnaire is multi-select (select all that apply); respondents who chose more than one value appear as **Mixed**.
- **Mixed** (Race/Ethnicity) — respondent selected more than one race/ethnicity value.
- **UTM Campaign** — `(none)` = direct/organic traffic.
- **Go365** — Humana Go365 member questionnaire; same flow types as BrainGuide Standard but a separate DynamoDB table. Data begins February 2025 and is current. Filter via the Questionnaire dropdown.
- **Historical data (pre-2024)** — before January 2024 the DynamoDB export did not exist. The legacy spreadsheet was a manual tracking document maintained during the QuickSight era, recorded in a standardized format. It provides monthly totals only (no individual-level records). DynamoDB and GA4 data from 2024 onward are more detailed and accurate; the spreadsheet is used solely to fill the historical gap where no other source exists.
- **BrainGuide Standard data gap (corrected 2026-07-07)** — a prior note here claimed the source DynamoDB export stopped updating May 26, 2026. That was checked against the raw table directly and is **false as of today**: `raw_dpn-chat-bot-content` has continuous daily records through at least July 5, 2026, and `mart_questionnaire_responses` shows completions through the same date. If this dashboard ever shows a real gap again, verify against the raw table before trusting a note like this one — it can go stale.
- **Fixed date floor, not a rolling window** — the funnel and outcome/demographic sources (`questionnaire_funnel.sql`, `questionnaire_responses.sql`) filter to `>= 2024-01-01`, a fixed date, not "N months back from today." A rolling window would have silently started trimming real Jan 2024 history around mid-2027 regardless of whether the source pipeline is healthy — any fixed historical window eventually ages out from under a rolling cutoff. Widen this floor only if the tracked start date changes.
- Funnel source: `usa2-brainguide.reporting.mart_questionnaire_funnel` (dbt), rebuilt daily.
- Outcome/demographic source: `usa2-brainguide.reporting.mart_questionnaire_responses` (dbt), rebuilt daily.
- Trend source: `usa2-brainguide.reporting.mart_questionnaire_trend` (dbt), rebuilt daily.
