

SBC Analysis

SBC — Speech Based Cognitive assessment. A **self-administered** speech task that produces a continuous risk score from **0 to 1** (higher = lower risk). Result routes to one of three tiers · **0.5 and up = Low Risk** · **0.2–0.5 = Medium Risk** · **under 0.2 = High Risk**

Flow Completion

SBC is a speech task, and most respondents who enter the flow never produce a scored result (they abandon or the recording fails). The rate below reflects the selected **date range and language only** — demographic filters apply to completed assessments elsewhere on this page.

Responses by Risk Level

Risk Level	Responses	Avg Score	Min
Low Risk	556	0.756	0.50
Medium Risk	442	0.346	0.20
High Risk	753	0.069	0.01

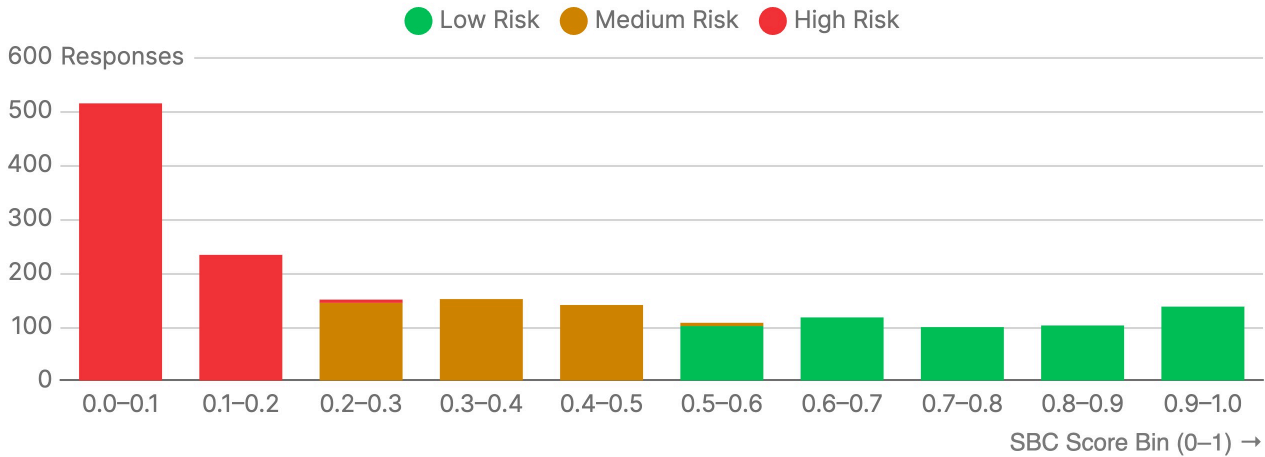

Score Distribution

The SBC score is continuous from 0 to 1. Responses below are grouped into 0.1-wide bins and colored by the risk tier they routed to.

Notes & definitions

- **SBC score** — a continuous value from **0 to 1** produced by a speech-based cognitive task. **Higher = lower risk.**
- **Risk tiers** — the assessment routes each respondent to one of three result pages: **Low Risk** (</navigate-next-steps-1/>, score ≈ 0.5 – 1.0), **Medium Risk** (</navigate-next-steps-2/>, ≈ 0.2 – 0.5), and **High Risk** (</navigate-next-steps-3/>, ≈ 0.0 – 0.2). The tier is taken from the routed result page, so scores exactly at a boundary may fall on either side.
- **Population** — this page counts **completed** SBC assessments only (those that produced a scored result). Most respondents who enter the SBC flow never reach a result; see **Flow Completion** above for the entry-to-completion rate.
- **Self-administered** — unlike AD8, SBC is taken by the respondent about themselves. Memory-concern questions ([cm_who](#), [cm_concerned](#)) are not part of

the SBC flow.
